

AURELINA

2525 CHU IP SOYBEAN

- EARLY MATURITY**
- GREAT PROTEIN CONTENT**
- STRONG YIELD FOR MATURITY**
- IP PREMIUMS**

STRONG YIELD FOR MATURITY

Aurelina soybeans are an excellent early maturing identity preserved soybean option for the midwestern Ontario region. The commodity professionals at Ceresco have identified that the bean has excellent IP market opportunities. The Protein and Oil content in these beans are very desirable for the export customers. There are significant IP premiums to be obtained for growing these beans!! Yield results have certainly been impressive based on how early these soybeans are (refer to Page 2 for OSACC data).

Agronomically, in recent years of evaluation, we have found Angelica to possess Medium to Tall plant height and a slender plant structure. They are best suited to narrow row width, and they have good standability, but are on the medium to tall side, so keep that in mind. They do demonstrate an above average tolerance to white mould, but it is still advised to use a fungicide protection where high fertility, thick canopy, or white mould history exists.

GROWING AREAS

Aurelina IP Soybeans have been grown and evaluated in Southwestern Ontario since 2018. They rank as a 00.5 RM group for maturity (2525chu). This would suit them well to the region within Bruce County>Palmerston>Orangeville, and still harvest in time to plant a good crop of winter wheat. These beans would be a very early option for regions like Listowel. Known to perform well in loam soils as well as the lighter soils of the Hanover area.

“Three years of growing Aurelina soybeans has given me the confidence in the variety that it will perform well and still allow me to get some wheat in the ground. Compared to other early IP soys like S03-W4, this one is earlier and not taking any yield away”. JR McLaughlin, Seed grower based in Palmerston

VARIETY SPECIFICATIONS

SEEDING RATE	185,000 to 200,000 seeds/ac standard rate
MATURITY	00.5 RM , 2525chu
PLANT STRUCTURE	Medium to Tall height (90 cm) - Slender plant
ROW WIDTH	Best suited to narrow rows, 7 to 10"
