CROP NOTES: This plot was planted into pretty tough conditions in late October. Planting conditions improved as we worked across the field (had more time to dry). The first 3-4 strips had thin areas in them this spring. The whole field had fertilizer broadcasted before planting and also had MESZ through the drill on all but the last strip. There was a sprayer miss from the alfalfa burndown spring 2021 in the No MESZ strip. Heavy dandelion pressure there may have impacted the stand somewhat
